

Exercise 5.4 (Individual Code Review)

DeleteRound – roundMode.js

confirmDelete – roundMode.js

```
257 +
258 +     deleteRound(roundId);
259 +     localStorage.setItem(
260 +         GlobalUserData.accountInfo.email,
261 +         JSON.stringify(GlobalUserData)
262 +     );
263 +     GlobalRoundsTableCaption.textContent =
264 +         "Table displaying " +
265 +         (GlobalRoundsTable.rows.length - 1) +
```

Comment on line R265

 **SragonSlayer** now Pending Contributor Author ...

Why are we subtracting one from here?

Are we assuming we always keep one empty round in the table?

Write a reply

Index.html

```
1558 1558 </form>
1559 1559 </div>
1560 + <div class="modal" tabindex="-1" id="confirmDeleteRoundModal">
```

Consider adding in accessibility items such as "aria-hidden="true" here.

It can be helpful to the user.

Consider deleting this line.

The function has no return.

```
226 + *****/
1577 +         type="button"
1578 +         class="btn btn-secondary"
1579 +         data-bs-dismiss="modal"
1580 +     >
1581 +         No, Cancel
1582 +     </button>
1583 +     <button
1584 +         type="button"
1585 +         id="confirmDeleteBtn"
1586 +         class="btn btn-primary"
1587 +         onClick=""
```

If this does nothing yet, or is handled elsewhere, please delete this.

Leaving an onClick handle where it is expected to action a different function elsewhere is confusing.
